

ROAD SAFETY HACKATHON 2026 • IIT MADRAS

RoadSoS

The AI Companion that turns every bystander into a first responder

Saving lives in the Golden Hour through AI-driven triage, location-aware dispatch, and voice-first accessibility in every Indian language.

THE PROBLEM

1.19M deaths/year. Half within 60 minutes.

45–90 min

BIMSTEC ambulance response time in rural areas — far beyond the Golden Hour.

< 5%

Bystander first-aid rate. Most people at a crash scene simply don't know what to do.

*"Most aren't killed by the crash. **They're killed by the wait.**"*

OUR SOLUTION

A multi-modal AI emergency companion — **WhatsApp, voice, SMS, AR** — that orchestrates the entire chain of survival.

SPEED

One tap or one phrase. No login walls during an emergency. Crash-detection ready.

VERNACULAR

English, Hindi, Assamese, Bengali, Tamil and more — voice-first, with code-mixed speech understood natively.

RESILIENCE

Offline-first design with SMS fallback. One bar of GSM signal is enough to dispatch help.

HOW IT WORKS

11 PM on NH-37, Assam — a real incident, second by second.

0:00 TRIGGER Ravi taps the SOS button — or simply sends "SOS" on WhatsApp.	0:05 LOCATE GPS locked to 16 m. First triage question asked — in the user's language: Assamese, Hindi or English.
0:20 DISPATCH Classified HIGH severity → an ALS ambulance is dispatched — not the closer PHC that lacks trauma care.	0:35 FIRST AID Voice guide walks Ravi through bleeding control, with a live AR camera overlay.
1:10 NOTIFY Nearest police station alerted; the victim's ICE emergency contact is called automatically.	11:20 GOLDEN HOUR Ambulance arrives. The ER is pre-warned with triage notes. The chain of survival held.

BUILT WITH

- LangGraph
- Llama 3.1
- FastAPI
- Whisper ASR
- IndicTrans2
- PostGIS
- WhatsApp API
- pgvector
- MediaPipe Pose

The triage question in panel 2 is generated and spoken in whatever language the caller uses — Assamese on NH-37, Hindi on NH-44, English in a metro. The same flow runs everywhere.

Engineered for life-critical reliability

PRESENTATION

PWA | WhatsApp | IVR | SMS | AR

AI ORCHESTRATION

LangGraph Agent | RAG (WHO Protocols) | IndicTrans2 | Whisper ASR

SERVICES

Dispatch | Geocoder | Notification | Fraud Detection

DATA

PostgreSQL + PostGIS | pgvector | Redis | Kafka

SAFETY-FIRST AI

RAG, not free generation — every instruction is grounded in the WHO / ATLS trauma corpus. If retrieval confidence falls below 0.78, the case is escalated to a human dispatcher.

Open-weights LLM

On-prem deployable

Offline-first

8 languages — English, Hindi, Assamese & more

From hackathon to BIMSTEC-wide deployment

22-
34%

mortality reduction — modelled against WHO trauma curves if accident-to-care response time is cut by just 15 minutes.

1

JUN 2026

Stage 1 submission (now) — PWA, WhatsApp bot, triage agent, multilingual.

2

Q3 2026

NH-44 + NH-66 pilot with state EMS partnerships.

3

Q4 2026

6 Indian states + Sri Lanka + Bhutan expansion.

4

2027

Cross-BIMSTEC rollout with national 112 integration.

Open-source SDK • Privacy-by-design • CoERS-led governance

THANK YOU

Every minute matters.
Let's give every road user a fighting chance.
